

Overview

Web service are one of three TAM standard data integration that can be used for integrating data in Realtime. The documentation of web service data definition should be standardized to make integration development easier to understands.

Purpose

The purpose of this document attempts to address this issue by identifying specific requirements that information systems must meet in order to generate appropriate audit logs and integrate with an enterprise's log management function.

Scope

This policy applies to all application and systems on Toyota Astra Motor.

Standard

General Requirement

All system that developed in TAM should refer to standard web service documentation

Technical Specification

No	Category	Description
1	Method	API Call method (POST/GET)
2	Media	Type of media often used, typically use application/json
3	URL	Full API URL that will be used
4	Body	Contain additional value if needed in every API request
5	Status	HTTP Response Code Status
6	Response	JSON response align with http status code

Color	Description
Red	Remove
Yellow	Change Position / Rename
Green	Additional
